

Analytics & Metrics

Task:

Brainstorm **North Star Metrics** and **OKR** (min 2 objectives with at least 3 KR's) for following products:

- Amazon prime
 - Assume your business goal for this quarter is to reduce churn
- YouTube Music
 - Assume your business goal is to ensure that first time users sign up with you instead of Spotify in India
- Zepto
 - Assume your business goal is to reduce contact center cost

AMAZON PRIME

Amazon Prime is a paid subscription service from Amazon that provides numerous benefits like fast free shipping, exclusive access to deals, Prime Video, and more.

The main goal of Amazon Prime as a feature is to increase customer loyalty, increase frequency of purchases, and enhance the overall user experience on Amazon.

North Star Metric: Customer Lifetime Value (CLV)

OKRs (Objectives and Key Results) for Amazon Prime

Objective 1: Reduce subscriber churn rate

Key Results:

a) **Decrease monthly churn rate from 2% to 1.5%:** This KR focuses on reducing the percentage of subscribers who cancel their Prime membership each month. To achieve this, Amazon could:

- Analyze reasons for cancellations and address common issues
- Implement targeted retention campaigns for at-risk subscribers
- Enhance the overall value proposition of Prime membership

b) Increase the average subscription length from 18 months to 22 months: This KR aims to extend the average duration a customer maintains their Prime subscription. Strategies to achieve this might include:

- Offering incentives for longer-term commitments (e.g., discounts for annual subscriptions)
- Continuously adding new benefits to keep the service attractive
- Personalizing the Prime experience to increase individual user engagement

c) Improve the Net Promoter Score (NPS) from 65 to 72: NPS is a measure of customer loyalty and satisfaction. To improve this score, Amazon could:

- Conduct regular surveys to identify areas of improvement
- Quickly address and resolve customer complaints
- Enhance customer support quality and responsiveness
- Surprise and delight customers with unexpected perks or features

Objective 2: Enhance customer engagement with Prime services

Key Results:

a) Increase the average number of Prime Video hours watched per user per month from 20 to 25: This KR focuses on boosting engagement with Prime Video. Strategies might include:

- Investing in more original content and exclusive titles
- Improving content recommendation algorithms
- Introducing interactive features like watch parties or in-app trivia
- Promoting binge-watching through auto-play and "next episode" recommendations

b) Boost the percentage of Prime members using at least 3 Prime services from 60% to 75%: This KR aims to increase the breadth of Prime service usage. To achieve this, Amazon could:

- Create cross-service promotions (e.g., free e-books for Prime Video watchers)
- Improve visibility and accessibility of less-used services
- Personalize service recommendations based on user behavior
- Educate users about the full range of Prime benefits through email campaigns or in-app notifications

c) Raise the average number of Prime-eligible purchases per user per quarter from 8 to 10 **Elaboration:** This KR focuses on increasing the frequency of prime shopping. Strategies might include:

- Expanding the range of Prime-eligible products
- Offering exclusive Prime member deals and early access to sales
- Implementing a rewards program for frequent Prime shoppers
- Improving the personalization of product recommendations

These key results provide a clearer picture of what Amazon Prime aims to achieve and suggest potential strategies for reaching these goals.

Main focus is on reducing churn by improving customer satisfaction and increasing engagement across various Prime services, ultimately leading to higher customer lifetime value.

YouTube Music

North Star Metric: Daily Active Users (DAU) in India

OKRs (Objectives and Key Results) for YouTube Music

Objective 1: Increase new user acquisition in India

Key Results:

a) Boost the number of new sign-ups in India by 30% compared to the previous quarter:
This KR aims to significantly increase the user base in India. To achieve this, YouTube Music could:

- Launch targeted marketing campaigns across various media channels in India
- Partner with popular Indian artists or influencers for promotional activities
- Offer extended free trials or special introductory pricing for new users
- Implement referral programs with incentives for both existing and new users

b) Improve the conversion rate from free trial to paid subscription from 40% to 50%:
This KR focuses on turning trial users into paying customers. Strategies might include:

- Personalizing the trial experience to showcase the most relevant features to each user
- Sending targeted communications highlighting unique value propositions compared to competitors
- Implementing a "freemium" model with certain premium features accessible during the trial
- Offering seamless, localized payment options tailored to the Indian market

c) Increase the share of first-time music streaming app users choosing YouTube Music over Spotify from 45% to 55%: This KR aims to make YouTube Music the preferred choice for new streamers. To achieve this, the company could:

- Highlight YouTube Music's integration with the broader YouTube ecosystem
- Emphasize unique features like music videos and live performances
- Target marketing efforts towards younger, first-time users through platforms popular in India
- Offer exclusive content or features not available on Spotify

Objective 2: Enhance the YouTube Music app's appeal to Indian users

Key Results:

a) Increase the number of India-specific playlists and radio stations by 50%: This KR focuses on providing more localized content. Strategies might include:

- Collaborating with Indian music experts to curate region-specific playlists
- Implementing AI-driven algorithms to create personalized Indian music mixes
- Launching radio stations dedicated to different Indian languages and genres
- Featuring playlists for popular Indian events, festivals, and cultural celebrations

b) Improve the average daily listening time per user in India from 45 minutes to 60 minutes: This KR aims to increase user engagement. To achieve this, YouTube Music could:

- Enhance the app's recommendation engine to better suit Indian music preferences
- Introduce features like seamless transitions between songs to encourage longer sessions
- Implement a "Daily Mix" feature tailored to each user's taste in Indian and international music
- Integrate podcast content relevant to Indian audiences to increase overall listening time

c) Boost the percentage of users engaging with localized features (e.g., Bollywood playlists, regional language content) from 70% to 85%: This KR focuses on increasing the use of India-specific features. Strategies might include:

- Improving the visibility of localized content through prominent placement in the app
- Implementing a language preference setting to customize the user experience
- Creating thematic campaigns around Indian festivals or movie releases
- Developing region-specific features like lyrics in local languages or music from local independent artists

These key results provide a comprehensive approach for YouTube Music to achieve its business goal in India. They focus on both acquiring new users and enhancing the app's appeal to Indian audiences, with an emphasis on localization and competing effectively against Spotify.

The strategies suggested aim to leverage YouTube's existing strengths while catering specifically to the preferences and needs of the Indian market.

Zepto

North Star Metric: Cost per Order

OKRs (Objectives and Key Results) for YouTube Music

Objective 1: Optimize contact center operations

Key Results:

a) Reduce the average handling time (AHT) of customer service calls from 5 minutes to 4 minutes: This KR aims to improve the efficiency of customer service interactions. To achieve this, Zepto could:

- Implement better training programs for customer service representatives
- Develop a more efficient knowledge base system for quick information retrieval
- Use AI-powered chat-bots to handle simple queries, freeing up human agents for complex issues
- Implement a system to categorize and prioritize calls for faster resolution

b) Increase the percentage of issues resolved through self-service channels from 40% to 60%: This KR focuses on empowering customers to solve problems independently. Strategies might include:

- Enhancing the FAQ section on the app and website with more comprehensive information
- Creating video tutorials for common processes and troubleshooting
- Implementing an AI-driven chat-bot that can handle a wider range of queries
- Developing a community forum where customers can help each other and share experiences

c) Decrease the number of contact center interactions per 100 orders from 15 to 10: This KR aims to reduce the overall need for customer service intervention. To achieve this, Zepto could:

- Improve the user interface of the app to make ordering and tracking more intuitive
- Enhance order status notifications to preemptively answer common questions
- Implement a feature for customers to easily modify orders without contacting support
- Use data analytics to identify and address common issues that lead to customer service calls

Objective 2: Improve order accuracy and customer satisfaction

Key Results:

a) Reduce the percentage of orders requiring customer service intervention from 8% to 5%: This KR focuses on minimizing errors that necessitate customer service involvement. Strategies might include:

- Implementing stricter quality control measures in the order fulfillment process
- Using AI and machine learning to flag potential issues before orders are dispatched
- Improving communication between the app, warehouse, and delivery personnel
- Offering a user-friendly interface for customers to easily report and resolve minor issues

b) Increase the first contact resolution (FCR) rate from 75% to 85%: This KR aims to resolve customer issues in a single interaction. To achieve this, Zepto could:

- Empower customer service representatives with more authority to make decisions
- Improve the training program to cover a wider range of scenarios and solutions
- Implement a comprehensive customer relationship management (CRM) system
- Develop a system to route calls to the most appropriate agent based on the issue type

c) Improve the CSAT (Customer Satisfaction) score from 4.2 to 4.5 out of 5: This KR focuses on enhancing overall customer satisfaction. Strategies might include:

- Regularly collecting and acting on customer feedback
- Implementing a loyalty program to reward frequent customers
- Offering personalized experiences based on customer preferences and order history
- Providing surprise upgrades or freebies occasionally to delight customers
- Ensuring timely and empathetic responses to customer complaints

Does	User tries to apply coupon code User tries to add delivery instruction Tries to give delivery partner tip
Thinks	Insights from P&S: Validated thinks how to remove a certain item from the cart in one go Insights from intuition Why/How my cart gets empty without any warning? The loading time is very high
Feels	Insights from P&S: Validated Annoyed that the user have to manually remove every item manually to remove the whole item Insights from P&S: Validated The user is confused whether the coupon is applied or not since it doesn't convey anything.
Pain Points	Insights from P&S: Validated User doesn't recognise the frequently brought together Insights from heuristics User might accidentally empty cart, there is no pop up to confirm action Insights: Not a part of hypothesis It takes time for user to figure out their is an empty cart button Insights: Not a part of hypothesis The max limit reached is not initially noticeable to the user

These key results provide a comprehensive approach for Zepto to achieve its business goal of reducing contact center costs. They focus on both optimizing contact center operations and improving overall order accuracy and customer satisfaction.

The strategies suggested aim to leverage technology, enhance self-service options, and improve the overall customer experience, which should collectively lead to reduced contact center costs while maintaining or improving customer satisfaction.
